

Cleaning the cache in IMVU the MANUAL way

1. Click on the File Explorer down below (the little icon looks like a folder)
2. On the left side of the window that opens click on C:
3. On the right side of the window double click on Users
4. Now double click your username
5. Double Click on AppData...if its not found then do these things
 - a. Click on VIEW in the TOP of the window
 - b. Click on HIDDEN ITEMS
6. Now double click AppData
7. Double Click on ROAMING
8. Double Click on IMVU
9. Double Click on HTTPCACHE
10. Make sure the first folder or file is selected then scroll to the bottom and hold down the shift key and make sure they are all selected (you want ALL folders and files selected in this folder)
11. Hit the DEL key, or the DELETE key in the Window
12. Say YES to deleting them and sit back and relax

Some of these will take quite a while to delete. Depending on how many you have and what kind of computer you have, these could take 10 mins – 12 hours to delete. If you haven't deleted these ever, except using the IMVU Tool to delete the Cache, this could take a while.

This is just another, MUCH CLEANER, way to delete all the files used in IMVU. This should make your computer a little faster when it is done.

***** REMEMBER – DO NOT LAUNCH IMVU ON THIS COMPUTER UNTIL EVERYTHING IS DONE! *****

These instructions are for Windows 10
